LOW-CARBON FREIGHT & SUPPLY CHAIN

Move more freight. Emit less carbon.

Electric last-mile fleets, rail-first long haul and route optimisation that cuts empty miles. Every shipment comes with a verified emissions report.

SERVICES

Every leg of the journey, planned for lower emissions

Electric last-mile

Zero tailpipe emissions for urban and regional delivery, routed to make every stop count.

Learn more →

Rail-first long haul

Move bulk freight between hubs by rail, with trucks only where rail cannot reach.

Learn more →

Route optimisation

Load consolidation and live routing reduce empty miles and idle time.

Learn more →

Emissions reporting

Shipment-level CO_2e data ready for your compliance and sustainability reports.

CARBON CALCULATOR

See what your shipment emits

Illustrative factors for comparison only. Final figures come from your verified shipment report.

Distance 800 km

Cargo weight 20 t

Transport mode

Diesel truck | Electric truck | Rail | Sea

Estimated emissions · Diesel truck

992 kg CO_2e

Baseline: a standard diesel truck for the same load.

Diesel truck	992 kg
Electric truck	320 kg
Rail	352 kg
Sea	128 kg

HOW IT WORKS

From booking to verified report

1

Share your lanes

Send origins, destinations, volumes and deadlines.

2

We plan the mix

We choose the lowest-carbon mode that meets your timing.

3

Track every leg

Follow location and emissions live from pickup to delivery.

4

Get your report

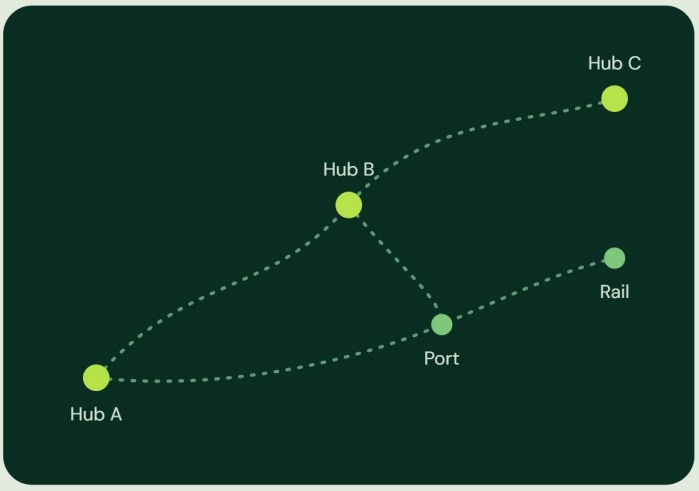

Receive a verified emissions summary per shipment.

NETWORK

Rail, port and electric hubs working as one

Freight moves on the lowest-carbon mode that still meets your deadline, then switches to electric vehicles for the final miles. Replace this copy with your lanes, regions and hub list.

- ✓ [Region or lane one]
- ✓ [Region or lane two]
- ✓ [Region or lane three]

Ready to lower the footprint of your freight?

Tell us your lanes and volumes. We reply with a route plan and an emissions estimate.
